

TITLE: Business Analyst – CADIS
LOCATION: London
SALARY: Competitive
REFERENCE: CbAcA

Our client is an institutional Investment Manager and they are looking to recruit an Asset Management Business Analyst with CADIS implementation experience to join their team on a contract basis.

The Business / Systems Analyst will be required to work on the Hub and Warehouse team, supporting the projects within the change programme. This will result in the implementation of a new Operating Model both in terms of the business processes, applications supported and organisational structure.

Role and Responsibilities:

- Analysis, specification, build, test and implementation of interfaces, workflow solutions, data warehousing and reference data solutions.
- Liaise across projects within the programme.
- Ownership of allocated work throughout its entire life cycle.
- Provision of pro-active support in the integration of projects within the programme.

Skills and Experience:

- CADIS Enterprise Data Manager (similar ETL tool experience considered).
- Asset Management business exposure.
- Demonstrable experience and success in executing the responsibilities described above.
- Netik Interview or similar data warehouse exposure advantageous.
- Market data sources and reference data systems experience advantageous.

Key Competencies:

- Excellent communications skills, both written and verbal.
- A “can-do” approach and enthusiastic willingness to be involved at all levels of the process.
- A team player who enjoys the significant challenges of large business-changing programmes.
- Keen attention to detail and adherence to standards and procedures.
